

PET Solutions

Ampacet offers several PET solutions that comply with present and future requirements.

ThermProtect™ for rPET retains thermal stability for better performance at high temperatures and over multiple heat histories. ThermProtect also reduces yellowing.

BlueEdge™ and **GreenEdge™** reduce the yellow or brown dingy appearance common with rPET, allowing the use of more recycled materials in applications.

UV Absorbers (UVA) provide overall content protection against damaging UV light to keep food and beverages fresher, prolong product shelf life and reduce waste.

PCR Color Matching allows customers to improve the aesthetics of recycled resins up to 100% rPET while maintaining the color of the brand.
